**PRODUCT DESCRIPTION**

Whether you already have a large collection of LPs, or you are just enriching it, whether you have a Hi-Fi system, or you're just setting it up step by step, the VL series is a perfect solution for all music lovers - especially for fans of vinyl records in search of the right place for their audio sessions.

The walnut wood finish is designed precisely to best fit in any environment, allowing also the easy arrangement of one's favourite objects, which often goes to accompany the fans' record collections. The modernity of the design is derived from the perfect fusion of tradition and functionality. The VL Series is

characterized by the essentiality of the furniture destined to last over time and, at the same time, functionally meets current and future needs of various audio systems that can be configured with passion and attention.

The bottom frame parts are made by stainless steel combined to adjustable spikes for perfect levelling. All the hardware frame parts are designed with inner spikes that increase the dampening of vibrations for reducing the frequencies that may generate resonance in the listening rooms.

Depending on various LP's dimensions you could have, you can typically accommodate at least 120 records per each level. If your collection is too big, do not worry - additional shelf kits are also available.

1
